

Digital Database Platform Services 2.0

Digital Database Platform Services 2.0 powered by Dell

Database is the core of an enterprise application. Databases are configured on a range of software and hardware technologies and hence prone to fragmentation and complex operations. Wipro's DDPS 2.0 makes database management simple with automation, one-click operations, and time-streaming to any point in time up to the last transaction.

DDPS 2.0 is a simple and elegant database management solution with a single control pane that scales transactional and NoSQL databases in a non-disruptive manner.

Key takeaways

Resolves practical challenges seen during Day Zero, One and Two and delivers tangible results to enterprises

Transforms the database ecosystem from complex to mature and capable of disbursing Database as a Service

Single touch provisioning of new databases and DB servers across open source and commercial database engines like MySQL, PostgreSQL, Redis and Mongo

Key Benefits

Wipro's DDPS 2.0 can reduce customers' database footprint through consolidation while significantly bringing down OPEX as well as delivering enhanced experience

Features

Database patching: Enables automated and efficient one touch solution for database patch deployment

Database operation: Facilitates automation of mundane and repetitive database administration tasks that take up 30-40% of a database administrator's time

Automation capabilities: Helps in deployment of out-of-the-box catalogues and Docker-based Kubernetes clusters, container server farms

Cloud experience: Provides teams managing databases on premise with an experience akin to managing public cloud

Manage databases by leveraging automation capabilities for reduced CapEx and OpEx service delivery acceleration and a performance driven experience
