COVID-19 Risks & Disruptions: Procurement & Supply Chain Solution

Mitigating challenges of procurement and supply risk

As global suppliers and their supply chains encounter shutdowns and severe disruptions, many businesses face huge uncertainties in their day-to-day operations. The problem is further compounded by international border restrictions imposed on these limited supplies. Wipro's solution for procurement, built on Oracle's Supply Chain, helps mitigate these challenges by simulating supply exception scenarios and offering resolutions that can be rapidly operationalized.

Rapid deployment of solution to help in planning, supplier risk assessment and order fulfillment

Key takeaways

Early warning of exceptions to help scout for alternate sourcing opportunities

Rapid identification of impacted orders

Minimize impact on customer shipments

Key benefits

Procurement planning: Early exceptions for item-shortage provide scope for planning of alternate sources of raw material

Supplier risk identification and analysis

Effective inventory planning based on advance availability information

Leverage automation and intelligent dashboards to significantly reduce man-hours spent on supply chain analysis

Enhance inbound supply chain planning process to minimize impact to customer shipments

Increase top line and reduce risk

Rapid Scenario Analysis Dashboards: Model and simulate exception scenarios using Oracle Supply Chain Planning to find solutions

Customer Orders Impact Dashboards: Reports to show impact on revenue, days of delay in order fulfillment due to procurement delays

Sales Order Priority Dashboards: Reports to prioritize high revenue orders and plan for alternate sources to minimize revenue loss

Purchase Order Prioritization Dashboard: Identify stock shortages in a time frame (10/30/60 days) and channelize supply for urgent demands
