# ServiceNow Vulnerability Response

**Agile best practices, accelerators, and domain & technology expertise for VR deployment**

ServiceNow Vulnerability Response helps organizations understand the most common and severe threats from external sources and from their own application developments. As a ServiceNow strategic partner, Wipro provides you with a step-by-step timeline for an industry-specific Vulnerability Management solution, based on ServiceNow Vulnerability Response, that includes a wide array of integrations with vulnerability scanners, configuration compliance, as well as threat intelligence solutions. We do this by leveraging ServiceNow's CMDB and its enterprise-wide workflow engine

**Leverage the power of ServiceNow software and Wipro's expertise for stronger Vulnerability Response and an effective patching capability for your organization.**

# Key benefits

Manage vulnerability, investigations, and align remediation activities

Integrate with the national vulnerability database and market-leading vulnerability solutions

Seamless communication with incident response tasks, change request and problem management

Utilize logical groupings of vulnerabilities to reduce the number of items requiring work

Automate the vulnerability exception process for increased efficiency and consistency

Provide request automation between security, IT patching & development teams and compliance teams

Leverage machine learning for vulnerability grouping, categorization and assignment

Relate vulnerabilities to threats

# Wipro-ServiceNow advantage

With two major security catastrophic issues like Meltdown and Spectre in 2018, experts were unable to identify the level of risk exposure and decide where to apply the solution first. Today, majority of breaches are due to existing vulnerabilities.

The ServiceNow platform can be designed so that vulnerability scan data is automatically imported into the Security Operations Vulnerability Response application using APIs. These reports are matched against the ServiceNow CMDB. The resulting vulnerable items are assigned a risk score based on multiple factors, including the severity of the vulnerability, and the importance of the affected asset. The risk score is configurable and provides quick prioritization.
